What is an end-point assessment?

EPA is the assessment an apprentice must take, to prove their competence, at the end of their apprenticeship.

For the Adult Care Worker (Level 2) and Lead Adult Care Worker (Level 3) standards, there are two parts to the assessment:

- situational judgement test (multiple choice format)
- professional discussion

Who is responsible for delivering end-point assessment?

Only End-point Assessment Organisations (EPAO) registered with the Education and Skills Funding Agency (ESFA) are authorised to deliver EPA.

Where can I find a registered End-point Assessment Organisations?

The EPAOs available for Adult Care standards can be found on the Register of End-point Assessment Organisations (RoEPAO):

www.gov.uk/guidance/register-of-end-point-assessment-organisations

When should you engage with the EPAO?

Early engagement significantly increases the chances of a successful outcome for your apprentice. EPAOs have different processes and resources to support the apprentice's preparation for the end-point assessment. You'll need time to choose the EPAO that is right for your service.

Preparation for EPA needs to be included in your on-programme learning. EPAOs estimate three month preparation time is required before apprentices are ready to attempt an EPA.

If you have any questions or are struggling to find the information you require about EPAOs or EPA please contact us at email: slqa@skillsforcare.org.uk

Important notes:

- ✓ You must be satisfied that the EPAO is completely independent of the on-programme delivery.
- ✓ You are FREE to choose the EPAO that meets your specific needs as they have different styles of delivery.
